We are pleased to invite you to the 1st Safe2Wheelers Workshop

Safe2wheelers COST Action aims at improving PTW safety with a holistic and integrated approach by acquiring, unifying and coordinating PTW safety research and ensuring broad dissemination towards PTW users, industry and public authorities.

Therefore, in order to bring together international experts working in the field of motorcycle safety for a mutual knowledge exchange, Safe2Wheelers will organize a workshop focusing on Accidentology and Simulators. An overview of best practices and results from PTW accident investigations and different existing motorcycle simulators shall be given and different technical solutions as well as potential use cases will be discussed. The workshop is open to industry and other researchers outside the COST Action network so that the dissemination of latest scientific findings is ensured.

The workshop will start with a plenary session bringing Working Group 1 (PTW Accidentology) and Working Group 2 (Motorcycle Simulators) participants together. Afterwards the two focus groups will split up in separated sessions. A bus transfer to visit the motorcycle simulators at WIVW will be arranged for WG2 participants.

More information about Safe2wheelers can be found in: www.safe2wheelers.eu

Please confirm your attendance by registering in the website before March 15th 2016.

Detailed information about the event including an agenda will be forwarded to registered persons beforehand.
